

# Abstract

**Name:** Analysis of individual game performance of side-backs in football

**Objective:** The aim of this study is to analyze the individual game activities of side-backs in the first and the third Czech Football League and compare their results.

**Methods of solution:** Match will be recorded at camera and after that the individual game activity of the player in the selected position will be analyzed..

**Work Results:** We observed frequency and successes rate of individual game activities of side defenders and compared the first league with the 3rd league. In our work we found quite surprising results, players from third league are more proactive and some of them were even better than the first professional league players.

**Keywords:** Football, analysis of individual gaming activity of individual game performance
